ABOUT US

In order to facilitate and speed up the entire growth of the company and the business owner, JMK Contracting Est. offers a wide range of specialized support & solution services.

JMK Contracting Est. was founded in response to the growing demand for comprehensive business support services, particularly by small and medium-sized company houses looking to expand quickly and steadily.

Every entrepreneur requires a variety of support services to make sure that his business operations function smoothly. The support needed may range from the need for competent, industrious human resources on the one hand, to the need for assistance with developing and implementing a digital marketing plan on the other.

JMK Contracting Est. has always held the belief that humanity should be able to progress for both present and future generations. JMK Contracting Est. ensures that anything is possible by giving the necessary resources.

The programs that direct our operations at every turn provide us with assurance of this. We are certain that we are not only making today better, but also investing in a better future thanks to our consideration for the environment, evolving safety regulations, and advancements in design and manufacturing.

OUR USP

We put goals and results at the forefront of everything we think and do, and we take ownership of the work that we commit to.

We are open to new experiences, whether they include people or ideas.

Except when a particular action conflicts with our own values, standards, or widely accepted principles, we always behave in the best interests of the company.

We want a setting that is upbeat and inspiring.

MISSION AND VISION

We have a solid technical foundation in the production of honing machines and excellent finishing equipment. Our capacity to provide customers with guidance is another key factor in our ability to remain viable in the cutthroat global market.

In keeping with our caption, we both shine and help our customers shine in their businesses.

SERVICES

- ✓ Technical Support
- ✓ Specialized Manpower
- ✓ Construction Management
- ✓ Heavy Equipment Rental
- ✓ Equipment & Power tools Trading
- ✓ General Contracting
- ✓ Diesel supply
- ✓ Portable water supply
- ✓ Dewatering

TECHNICAL SUPPORT

Tech support, often known as technical support, is a sort of call Centre customer service offered by businesses to help and advice registered users with problems relating to their technological goods.

Technical support services include troubleshooting hardware and software issues and assisting clients with application and programs installation. The executives use remote desktop connections to configure operating systems and fix network problems in order to offer quick help.

SPECIALIZED MANPOWER

JMK Contracting Est. is able to offer its client specialized labour to manage difficult and time-sensitive tasks.

Technical Staffing is offered by JMK Contracting Est. for carriers and vendors who experience activity peaks during expansions and may need temporary staff to keep up with the activities. We have a sizable pool of carefully chosen individuals who can assist with these tasks. In addition to staffing, JMK Contracting Est. is able to offer technical direction, management, and support.

JMK Contracting Est. manpower comes with support from our core team, providing better results and giving an inside to the carrier requirements.

CONSTRUCTION MANAGEMENT

The full lifecycle of a construction project is managed through planning, budgeting, coordinating, and supervision. Buildings, roads, bridges, and other structures are just a few of the construction projects that a construction manager might work on. The supervision of all aspects of construction projects is known as construction management.

Construction managers develop and maintain schedules, structure and handle budgets, oversee on-site safety, and ensure that everyone completes tasks on time.

HEAVY EQUIPMENT RENTAL

Equipment rental, also known as plant hire, is a service sector that offers final users, primarily construction contractors but also industry and individual consumers, machinery, equipment, and tools of all kinds and sizes (from earthmoving to powered access, from power generation to hand-held tools, etc.) for a brief period of time.

Renting is the process of obtaining equipment for a short period of time in order to assist those who are unable to purchase it outright.

EQUIPMENT & POWER TOOLS TRADING

It's crucial to remember that if used improperly or without the necessary level of expertise or experience, many tools can be highly deadly. Even the most skilled craftsmen can nevertheless get into an accident, despite receiving sufficient training. For individuals in the skilled crafts, they are crucial because they make tough tasks easier.

A tool that is operated by a mechanism and additional power source in addition to manual work, as is the case with hand tools, is referred to as a power tool. Power tools with electric motors are the most prevalent kind. compressors and internal combustion engines.

GENERAL CONTRACTING

Larger residential projects are constructed under the direction and supervision of general contractors. This individual, group, or company enters into the main agreement with the property owner and is in charge of managing the project.

A general contractor is a construction manager who works for a customer, typically on the architect's or engineer's recommendation for the project.

A general contractor must first evaluate the documentation specific to the project. For renovation projects, a site visit is necessary to have a deeper grasp of the undertaking.

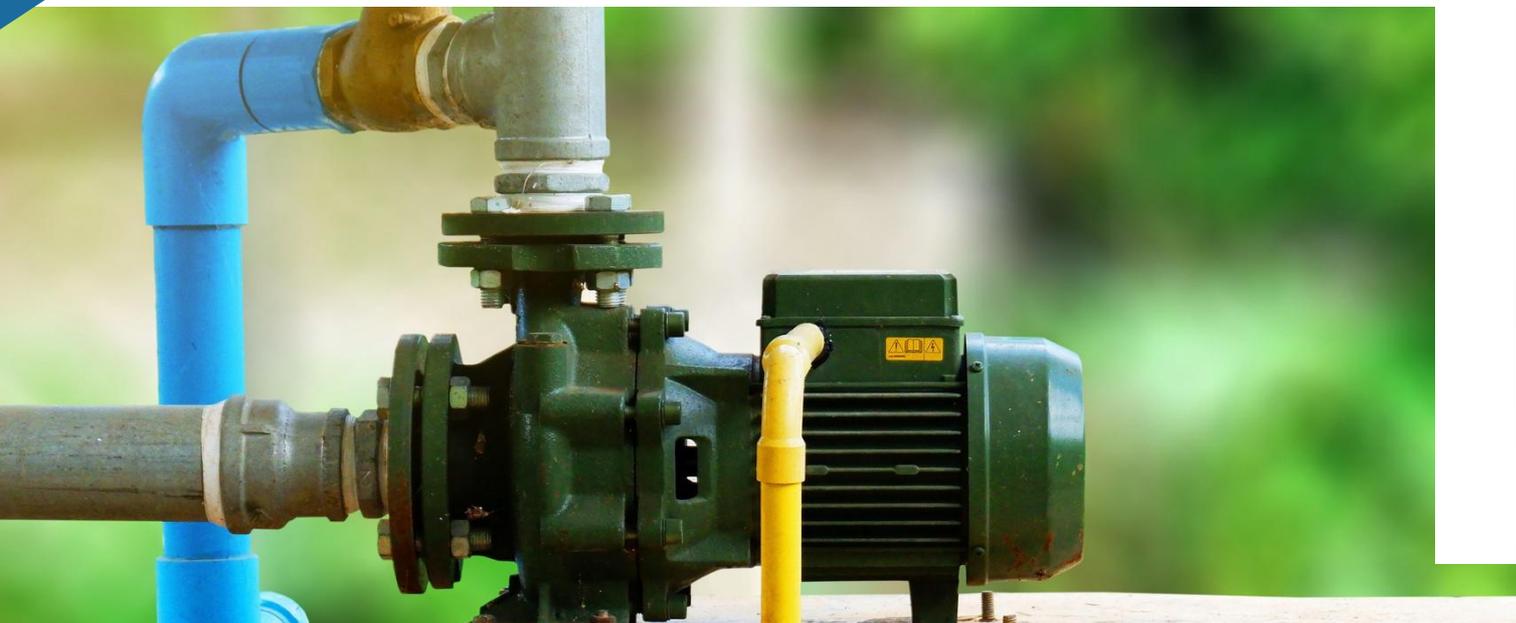

DIESEL SUPPLY

Fuel Supplies refers to both the transportation and transmission services used to deliver the coal, oil, natural gas, and other fuels that generation facilities use to produce electricity.

Through high pressure pipes, the fuel injection pump delivers fuel under high pressure to the injectors. The fuel is atomized and then injected into the engine's combustion chamber via the injectors.

Fuel is supplied in large quantities to the fuel injection pump. The raw materials used to refine diesel fuel are biomass and crude oil.

PORTABLE WATER SUPPLY

Drinking water, also referred to as potable water, is obtained from surface and underground sources and treated to meet state and federal criteria for consumption. Natural water is purified to remove viruses, germs, hazardous compounds, faces, and microbes.

Water that is fit for drinking should be clear, tasteless, and low in mineral salts. It must also adhere to very strict hygiene requirements. For oxidation, membrane filtration, desalination, and disinfection, we provide a complete spectrum of technologies.

Our systems, along with every one of its parts, are produced in-house, and they can either be pre-assembled and set up for usage, or they can be customized.

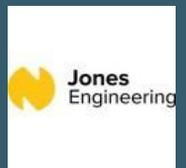

DEWATERING

Dewatering refers to the process of removing surface or ground water from a location, such as a construction site. In order to facilitate excavation in dry and stable conditions below the natural groundwater level, water is temporarily pumped from wells or sumps during construction.
